PROFESSIONAL SUMMARY

Senior Software Development Engineer in Test (SDET) with 6.6+ years of experience designing, leading, and scaling automation solutions across Cybersecurity, FinTech, Supply Chain, EdTech, and E-commerce domains. Expertise in Pytest, Selenium, TestNG, REST API automation (RestAssured, Postman), and CI/CD pipeline integration & regression orchestration (Jenkins, Bitbucket Pipelines, Allure reporting). Strong ownership across end-to-end QA lifecycle including requirement analysis, test planning, automation strategy, production stability, and cross-functional collaboration in Agile/Scrum environments.

TECHNICAL SKILLS

- Programming: Python (Automation, API, Data Handling), Java (OOP, Collections)
- Automation Tools: Selenium WebDriver, Pytest, TestNG
- API Testing: REST API Automation, RestAssured, Postman, Requests, JSON Validation
- Framework Design: Hybrid, Data-Driven, Modular, Page Object Model (POM)
- CI/CD & Reporting: Jenkins, Bitbucket Pipelines, Allure Reporting, Scheduled Regression Execution
- AWS & Environment: EC2 provisioning & upgrades, Spot Instance management, Backend Feature Flag control, Environment configuration, User/Access management
- Database: SQL (Joins, Subqueries, Correlated Subqueries, CRUD operations)
- Version Control: Git, GitHub, Bitbucket
- Testing Scope: Cross-browser testing, Regression, Sanity, Integration, System Testing
- Methodology: Agile / Scrum, Sprint Planning, Release Validation

PROFESSIONAL EXPERIENCE

Test Yantra Software Solutions Pvt. Ltd., Bangalore

Senior SDET / QA Automation Engineer | 2019 – Present

Cyware Labs – Cybersecurity Platform

- Designed and enhanced Python-Pytest hybrid automation framework for UI and REST API workflows.
- Automated critical business test cases reducing manual regression effort by ~60%.
- Integrated automation suites into Jenkins & Bitbucket CI/CD pipelines with scheduled nightly regression runs.
- Implemented Allure reporting for execution insights and improved release visibility.
- Improved pipeline stability by resolving flaky tests reducing CI failures by ~40%.
- Participated in requirement analysis, test planning, sprint estimations, and end-to-end QA lifecycle ownership from story grooming to production validation.
- Performed official production website validation including cross-browser compatibility and release sanity checks prior to deployments.

- Provisioned and upgraded AWS EC2 instances including Spot instances for environment validation and release testing.
- Managed backend feature flags and environment configurations for controlled production releases.
- Led production issue investigations, root cause analysis, and customer-impact resolution.
- Collaborated with Dev, DevOps, and Product teams for release sign-off and deployment readiness.
- Mentored QA engineers and established automation best practices across modules.

Other Enterprise Projects – FinTech, Supply Chain, EdTech, E-commerce

- Developed Selenium/TestNG hybrid frameworks for enterprise banking and fintech applications.
- Automated API validations using RestAssured and Postman for backend verification.
- Worked with Japanese client stakeholders for localized UI validation and requirement clarification in Supply Chain domain.
- Performed FRS analysis, test planning, sprint validation, and QA handover.
- Conducted cross-browser, integration, and system testing for multi-domain platforms.
- Managed defects using JIRA and performed SQL-based data validation.
- Conducted KT sessions and mentored junior QA engineers on automation frameworks, API testing, and CI/CD practices.

EDUCATION

Bachelor of Engineering (B.E.) – KSIT College, Bangalore
